EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with T. Liang on 10/11/07.

The application has been amended as follows: In the claims:

In claim 1, line 11, "of pressing" has been replaced by --applying pressure to press— and in line 12, "heating" has been replaced by --maintaining--.

In claim 6, line 2, "pressing" has been replaced by --applying pressure to press--.

In claim 7, line 2, "pressing" has been replaced by --applying pressure to press--.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or fairly suggest bonding a semi-conductor chip and a substrate together wherein an adhesive is applied to the substrate and heating to higher than its reaction start temperature, the chip is actively pressed into the adhesive while not pressing enough to allow the connection terminals on the chip to come into contact with the connection terminals on the substrate, and then the temperature of the adhesive is raised and the connection terminals contact while pressure is applied. It is noted this claim is considered to require the temporary bonding step to be more than a location in a continuous heating curve from the start temperature to the higher temperature of the

Art Unit: 1791

permanent bonding step, i.e. the temperature profile of the adhesive should have a step or flattened area such that difference between the temporary bonding step and the permanent bonding step is clear. While Watanabe(U.S. Patent 6,077,382) discloses the majority of these steps, it clearly indicates the temporary bonding step occurs at an adhesive temperature BELOW the reaction start temperature. While Honda et al.(U.S. Publication 2002/0173145) discloses tow pressing steps with two temperatures, the connection terminals do not contact one another. The reference also does not suggest that the first temperature is higher than the reaction start temperature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
